

Assignment– Automation using Selenium – Getting Data

Problem Statement:

Create Python scripts using Selenium WebDriver to automate browser actions and extract data from websites.

The program should:

- Create WebDriver instance using `webdriver.Chrome()`
 - Open web pages like Google and Amazon using `driver.get()`
 - Use `driver.maximize_window()` to maximize browser window
 - Locate elements using locators like `By.NAME`, `By.CLASS_NAME`, `By.LINK_TEXT`, and `By.XPATH`
 - Perform search operation using `send_keys()`
 - Click elements using `click()` method
 - Use `time.sleep()` for wait handling
 - Refresh web page using `driver.refresh()`
 - Extract multiple elements using `find_elements()`
 - Display extracted data in console using `print()`
 - Close browser using `driver.quit()`
-

Expected Output:

Running the scripts should:

- Open browser and load web pages
 - Perform automated search and navigation
 - Click and interact with elements successfully
 - Refresh pages when required
 - Display extracted data in terminal
-

Submission Guidelines:

- Create **ONE main folder**.
- Example folder name:
SeleniumAutomation-YourName
- Inside this folder include:
 - Python source code files (.py)
- Convert the folder into **ZIP format**.
- Upload the ZIP folder on the submission portal.
