

Assignment- Python Chat Application

Problem Statement:

Create a Python Chat Application that enables communication between a client and a server using Socket Programming.

The application should:

- Create a server that listens for incoming connections.
 - Create a client that connects to the server.
 - Allow messages to be sent from the client to the server.
 - Allow messages to be sent from the server to the client.
 - Display sent and received messages.
 - Support two-way communication between the client and server.
 - Use separate files for client-side and server-side implementation.
-

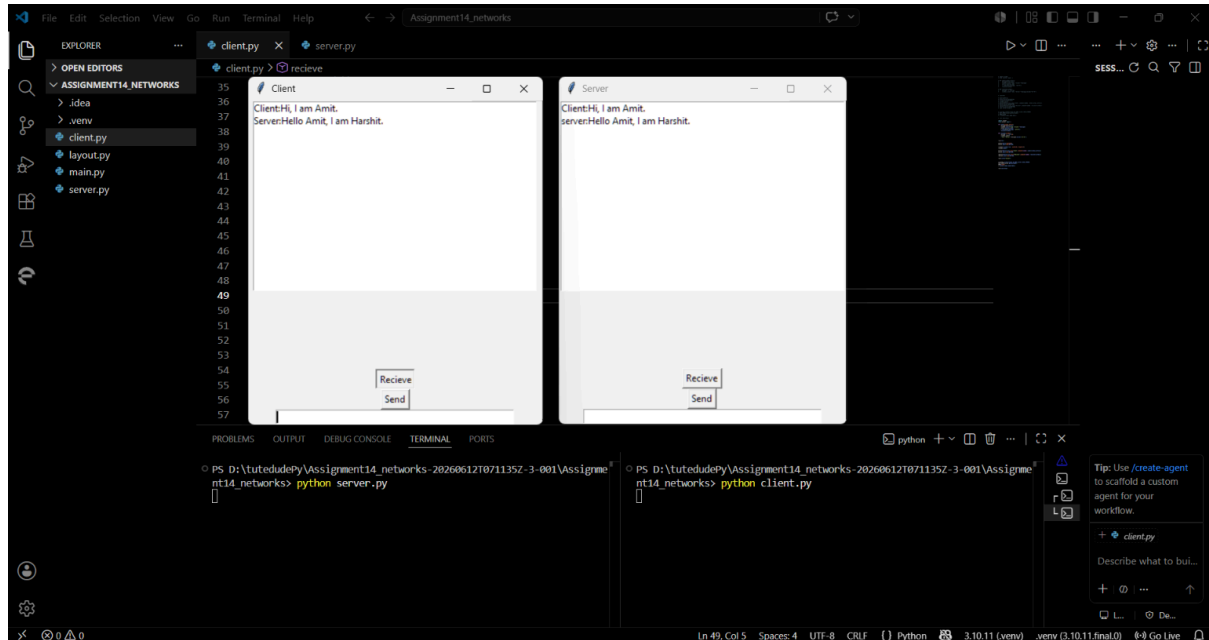

Expected Output:

The application should:

- Successfully establish a connection between the client and server.
 - Allow users to exchange messages.
 - Display all sent and received messages correctly.
 - Demonstrate communication between both sides.
-

Output Screenshot

Submission Guidelines:

- Create **ONE** main folder.
- Example folder name:
PythonChatApplication-YourName
- Inside this folder include:
client.py
server.py
layout.py
main.py
- Convert the folder into **ZIP format**.
- Upload the ZIP folder on the submission portal.
