

ASSIGNMENT 4:

Module 5: Files, Exceptions, and Errors in Python

Task 1: Read a File and Handle Errors

Problem Statement: Write a Python program that:

1. Opens and reads a text file named sample.txt.
2. Prints its content line by line.
3. Handles errors gracefully if the file does not exist.

Expected Output:

If the file exists:

```
Reading file content:  
Line 1: This is a sample text file.  
Line 2: It contains multiple lines.
```

If the file does not exist:

```
Error: The file 'sample.txt' was not found.
```

Task 2: Write and Append Data to a File

Problem Statement: Write a Python program that:

1. Takes user input and writes it to a file named **output.txt**.
2. Appends additional data to the same file.
3. Reads and displays the final content of the file.

Expected Output:

For example, if the user enters 25, the output should be:

```
Enter text to write to the file: Hello, Python!
Data successfully written to output.txt.

Enter additional text to append: Learning file handling in Python.
Data successfully appended.

Final content of output.txt:
Hello, Python!
Learning file handling in Python.
```

Submission Instructions:

- Keep all required files in **one single folder**.
- Make sure all files are complete and correctly named.
- Convert the folder into a **ZIP file** before uploading.
- Rename the ZIP file using your **Name_AssignmentName** format.
- Check the ZIP file once to ensure all files open properly.
- Upload **only the ZIP file** on the submission portal.
- Add both **Task 1 and Task 2** scripts in the same Folder.
- Submit the **Zip File**.

Reference:

Follow the **Python course - Module 4: Functions & Modules in Python** for additional guidelines and examples.

Note:

Please test your project thoroughly and check all the validations and error handling prior to ensure it works as expected before submission.
