

Assignment- Tkinter calculator

Problem Statement:

Create a Python calculator application using the Tkinter library that provides a graphical user interface (GUI) for performing basic arithmetic operations.

The calculator should:

1. Display an input field for entering numbers and viewing results.
 2. Include buttons for digits (0–9).
 3. Support the following mathematical operations:
 - Addition (+)
 - Subtraction (-)
 - Multiplication (*)
 - Division (/)
 4. Include an equals (=) button to calculate and display the result.
 5. Include a clear button to reset the input field.
 6. Use Tkinter widgets such as:
 - Window
 - Entry
 - Button
 7. Handle user interactions through functions and button commands.
-

Expected Output:

The application should open a calculator GUI window where users can:

- Enter numbers using on-screen buttons.
 - Perform basic arithmetic operations.
 - View calculated results in the display field.
 - Clear the display using the Clear button.
-

Output Screenshot

Submission Guidelines:

- Create **ONE main folder**.
- Example folder name:
TkinterCalculator-YourName
- Inside this folder include:
 - Python source code file (.py)
- Convert the folder into **ZIP format**.
- Upload the ZIP folder on the submission portal.
