

Assignment- Web Scraping using Python

Problem Statement:

Create a Python program that extracts product details from a website using web scraping techniques.

The program should:

- Fetch webpage data
 - Extract product title, price, and image URL
 - Download product image
 - Compare product price with a target price
 - Handle multiple product URLs
-

Expected Output:

Running the program should:

- Show extracted product details
 - Show price comparison result
-

Note:

Ensure the code runs properly and outputs are generated successfully before submission.

Submission Guidelines:

- Create **ONE** main folder.
- Example folder name:
WebScraping-YourName
- Inside this folder include:
 - Python source code file (.py)
- Convert the folder into **ZIP format**.
- Upload the ZIP folder on the submission portal.
